

School bullying: a case analysis using statistics

Marilene Vale dos Santos ^{1 3}, Marina Rodrigues Maestre ^{2 3}

Abstract: *Use of statistics to identify the adolescents profile regarding sociodemographic variables, presence and impacts caused by bullying. The concern that the factors for so much aggressiveness were caused by the variables studied does not make sense. Students who are subject to be victims feel comfortable to tell this to others.*

Keywords: Violence; Teenager; School; Chi-Square; Independence.
