

Study on the self-evaluation of health in the elderly population of Brazil using Categorical Multiple Regression model - CATREG

Marcela Portela Santos de Figueiredo¹, Danielle Freitas Santos², Tiago Alessandro Espínola Ferreira³, Caroline Maria de Miranda Mota⁴

Abstract: This study aims to analyze the factors that influence the self-evaluation of health of the Brazilian elderly population. Among the factors that have the greatest influence were: failure to perform usual activities (16.9%), Diagnosis of chronic disease (14.5%), to have health or oral insurance (10.2%).

Keywords: Brazilian elderly people; CATREG; PNS; Self-Assessment of Health.
