

MODELING SOME DISCRETE DISTRIBUTIONS THE LENGTH OF WET SPELLS

Marta Eliane Echeverria Borges¹, Josmar Mazucheli², Diogo Francisco Rossoni³

Abstract: This paper was to use the discrete gamma distributions, discrete Weibull, negative binomial, zero truncated negative binomial, geometric and zero truncated geometric to model the length of wet spells days in weather station of Calçoene - AP, since it is the city more it rains in Brazil.

Keywords: discrete distributions; length of wet spells days.
