

The Weibull Distribution in Time Data Modeling Until Divorce

Fabio Douglas Soares Bezerra¹, Daniel Valentins de Lima², Evandro Mariano Barros da Silva³, Marcelino Alves Rosa de Pascoa⁴, Graziela Dutra Rocha Gouvea⁵

Abstract

This study started with the intention of modeling the time until a divorce, which allows us to verify in which period a marriage is likely to suffer a separation. The distribution that models the data allows us to more accurately predict in what intervals marriages are more likely to break.

Keywords: Time; Divorce; Probability; Weibull Distribution.
