

Low quality of life in depressed female smokers: results of a clinical trial

Mariana Ragassi Urbano ¹, Regina Machado ², Sandra Nunes ³, Mauro Porcu ⁴, Rodrigo Rossetto Pescim ⁵

Abstract: *A clinical trial was conducted to identify characteristics in depressed female smokers, to better clarify the process that link mood disorders, childhood trauma and smoking in women. We concluded that depressed female smokers have lower quality of life, higher scores of anxiety and depression when compared to female non smokers and non mood disorders. .*
