

Predictive model for the number of reports of dengue in the Metropolitan Region of Recife-PE

Jucarlos Rufino de Freitas ¹, André Luiz Pinto dos Santos ², Denise Stéphanie de Almeida Ferreira ³, Antonio Samuel Alves da Silva ⁴, Guilherme Rocha Moreira ⁵, Moacyr Cunha Filho ⁶

Abstract: *The Box e Jenkins methodology was used in the study, with the objective of obtaining a statistical model that would allow predicting possible outbreaks of the disease in the Metropolitan Region of Recife/PE.*

Keywords: Aedes Aegypti; Modeling; Prediction.
