O crescimento do percentual de idosos na Região Sudeste: Uma aplicação via modelo linear misto

Luiz Otávio de Oliveira Pala [1], **Eric Batista Ferreira** [2], **Juliana Petrini** [3]

Abstract: Changes like population aging, demographic transition and reduced fertility have been noted in countries around the world. This paper analyzes the percentage of the elderly at southeastern, using a mixed model. The results highlighted that the states of Rio de Janeiro and São Paulo had increased the average percentage of elderly people.

Keywords: Population Ageing; Repeated Measures; Percentage of the Elderly; Southeast.
