Relationship between self-assessment of health, work and education: a study based on Principal Non-Linear Component Analysis using CATPCA-Categorical Principal Components Analysis

Marcela Portela Santos de Figueiredo[1], Danielle Freitas Santos[2], Tiago Alessandro Espínola Ferreira[3], Caroline Maria de Miranda Mota[4]

Abstract: This study sought to establish the relationship between health self-assessment and non-pathological factors that could influence it. The microdata of the National Health Survey of 2013 was used, and a strong association was found between health self-evaluation, work and education (literacy).

Keywords: health self-assessment; microdata; CATPCA; PNS.
