Determinação de ponto crítico em curva de crescimento na dinâmica do potássio

Rayane Santos Leite[1], Iago Renan Valentim da Silva[2], Tiago Almeida de Oliveira[3], Ana Patricia Bastos Peixoto[4]

Abstract: Segmented applications, such as linear response plateau the optimum depth of potassium content in the soil was verified through this class of models LVA, the depth was 0.48 and in the soil NV the depth was 0.25 a good fit was obtained according to the coefficient of determination.

Keywords: Segmented Regression; Depth; Response Plateau.
